

*The region's number one electrical engineering contractor*

**Load monitoring & Phase balancing**  
Increase energy efficiency  
Reduce carbon footprint  
Reduce stress on overloaded phases  
Improve electrical safety

**Projects:** Manufacturing facilities, Assembly plants, industrial workshops

**Application:** Reduce energy cost & carbon footprint, improve safety, reduce downtime

ParCar's technicians have extensive 3-phase experience and we provide cutting edge load monitoring and phase balancing services. Many manufacturing facilities have increased capacity and this potentially leads to phase Imbalance and excessive loads unless periodic testing is undertaken.

Load monitoring and subsequent phase rebalancing improves safety and can result in significant costs savings as power usage is redistributed across the phases thereby reducing peak loads.
